Arginex®

Cleanses the Body to Promote Blood Purification

The kidneys serve as the primary filtration system for our blood by removing waste material and then disposing of the debris through urination. The urinary system is a complex network and resorption system made up of more than 2 million nephrons. The nephrons, in turn, are comprised of glomeruli and renal tubules that extract urea, salts, and all other soluble wastes from blood plasma under high pressure before returning the refined filtrate to the blood. Blood is made up of four different parts: plasma, red and white blood cells, and platelets. These four different parts of our blood each help sustain life by consistently performing their unique functions. If any of these operations are compromised, it can have a direct consequence on overall health. A lack of important nutrients in the diet can diminish the kidneys’ filtration efficiency and impair the blood’s ability to perform its designated tasks. Each nutrient in Arginex provides a natural aid to help the kidneys remove metabolic byproducts and toxins from the blood.†

How Arginex Keeps You Healthy

Keeps your blood cleaner and promotes healthy blood vessels
Specific nutrients help maintain healthy cholesterol and saturated fat in the blood. Oat flour contains niacin, lecithin, and vitamin E to assist in removing residual fats from the blood. The high-fiber content of oats boost the body’s ability to reduce plaque buildup on arterial walls. Buckwheat contains rutin to help keep arterial vessels healthy. The tissue of the tillandsia plant can help promote healthy blood-sugar levels. Beets support blood purification.†

Keeps your heart healthy
Beets and oats help strengthen the heart muscle and improve circulation to help maintain vascular health.†

Supports renal function
The nutrients in Arginex work to help the kidneys remove metabolic waste from the blood.†

Arginex®

What Makes Arginex Unique

Product Attributes
Contains distinctive enzyme complexes from buckwheat juice and seed, pea

vine juice, oat flour, bovine liver, and beet root with a special yeast strain of

Rhizopus oryzae

› Supports the cleansing ability of the kidneys

Multiple nutrients from a variety of plant and animal sources

› Bovine tissues provide nutrients and support to the corresponding tissues in

humans

› Vitamins, minerals, and nutrients from plants and animal tissues work

synergistically for maximum effect

Certified Organic Farming
A healthy ecosystem is created by using organic farming techniques, such as

rotating crops, fertilizing the soil with nutrient-rich cover crops and

byproducts from our processing, practicing strict weed-control standards, and

continually monitoring the health of our plants

› Assures the soil is laden with minerals and nutrients

› Ensures plants are nutritionally complete and free from synthetic pesticides

Manufacturing and Quality-Control Processes
Upon harvesting, nutrient-rich plants are immediately washed and

promptly processed

› Preserves nutritional integrity

Low-temperature, high-vacuum drying technique

› Preserves the enzymatic vitality and nutritional potential of ingredients

Not disassociated into isolated components

› The nutrients in Arginex are processed to remain intact, complete

nutritional compounds

Degreed microbiologists and chemists in our on-site laboratories continually

conduct bacterial and analytical tests on raw materials, product batches, and

finished products

› Ensures consistent quality and safety

Vitamin and mineral analyses validate product content and specifications

› Assures high-quality essential nutrients are delivered

Whole Food Philosophy
Our founder, Dr. Royal Lee, challenged common scientific beliefs by choosing a

holistic approach of providing nutrients through whole foods. His goal was to provide

nutrients as they are found in nature—in a whole food state where he believed their

natural potency and efficacy would be realized. Dr. Lee believed that when nutrients

remain intact and are not split from their natural associated synergists—known and

unknown—bioactivity is markedly enhanced over isolated nutrients. Following this

philosophy, even a small amount of a whole food concentrate will offer enhanced

nutritional support, compared to an isolated or fractionated vitamin. Therefore, one

should examine the source of nutrients rather than looking at the quantities of individual

nutrients on product labels.
