Energy Boosters

Ways to Get You Through the Day

Rebecca Jones

No amount of coaxing, pleading, or pedal pumping could get the engine in the rental car to turn over. It was going nowhere. The travelers had filled the car with unleaded fuel, but it had a diesel engine. It had been able to run a little way on the wrong fuel, but not far. And when it finally stopped, it stopped for good.

Sometimes cars and humans aren't so different. Both need the right fuel to run at maximum efficiency. Put too much of the wrong stuff in, and a breakdown may be unavoidable.

Here are some tips to keep your body humming along like a well-tuned engine, full of energy.

so-called "energy bars" are unpalatable but good for you, while candy bars are delicious but bad. Many energy bars are filled with sugar, so read labels, and look for high fiber, high protein, and limited carbs.

Nuts are among the best choices for healthy, pick-me-up snacks, nutritionists say. Nuts such as almonds, Brazil nuts, cashews, and hazelnuts are all loaded with magnesium, a mineral whose health benefits include improving heart health, decreasing the risk of diabetes, reducing stress, improving muscle functioning, and reducing insomnia.

Another super snack food is dark

You know you're supposed to get your eight hours!

Be Snack Smart

Strategic snacking can be a good way to smooth out dips in your energy level and avoid hunger cravings that can lead you to overeat when you finally do sit down to a full meal. So go ahead and snack. Just be as choosey in your snack selection as you are in meal planning.

Don't fall for the fiction that all

chocolate, which is rich in heart-protecting antioxidants and can improve blood flow, which will energize flagging muscles. Even milk chocolate gets a thumbs up because it provides calcium for the bones. So enjoy it--in moderation.

Stay Hydrated

Just because you're not thirsty does not mean you aren't dehydrated, and even slight dehydration can leave you tired and lethargic. The answer is, of course, to drink plenty of water. If the taste of plain water doesn't excite you, consider some of the flavored varieties, keeping in mind that loads of extra sugar should be avoided.

One increasingly popular healthy hydration alternative is coconut water, which studies suggest may hydrate more quickly than plain H₂O and which contains more potassium and less sodium than other energy drinks.

Massage and More

The inherent demands of your life may lead to muscle strains, stress, and other conditions that can affect your energy levels. One of the best strategies is to get into a regular pattern of receiving massage. If you feel the need for some quick bodywork between sessions, consider self-massage possibilities.

One option is to use a foam roller, a firm foam log that comes in varying thicknesses--think of them as comfy rolling pins. You can use your own body weight to generate direct pressure as you roll over the roller, working out muscle knots.

Aromatherapy is also a great way to get a quick energy boost, as certain scents are able to fight fatigue. Queen among them is peppermint, and other lethargy busters include eucalyptus, citrus, cardamom, and even cinnamon and black pepper.

Get Some Rest

The number one myth about sleep is that you can get by on six hours a night. The truth is that the further away you deviate from getting eight hours sleep a night--and some people get too much, not too little--the greater the risk of cardiovascular disease, depression, obesity, and a host of other maladies.

Make sleep a priority. Get on a regular schedule, stick to it, and stop allotting to sleep only whatever time is left over after everything else gets accomplished. Once you've gone to bed, though, you have to actually go to sleep, and for many people that's no easy feat.

Caffeine is often the culprit. Caffeine is a great pick-me-up first thing in the morning, but it has a six- to seven-hour "half-life," meaning that half the caffeine in that cup of coffee you consumed to ward off the 3:00 p.m. doldrums will still be lingering in your bloodstream after the 10:00 p.m. news.

Another stimulant many people don't often consider is light--particularly light from a computer or television screen. Dim light from a soft reading lamp is fine, but the bright blue light of electronic devices sears itself into our minds and fools them into thinking it's still daylight outside, which makes falling asleep seem unnatural.

Heat, whether internal or external, will also disrupt sleep. The ideal room temperature for sleeping is around 65 degrees. The cool air then wicks away heat from your body, which allows you

to fall asleep. Anything you do to increase your body's core temperature, like exercising or eating a big meal right before bedtime, makes it harder for your body to cool down to a comfortable sleeping temperature.

Naps are tricky luxuries. Taken wisely and in moderation, they'll restore mental alertness and fuel you through a long afternoon. But too long a nap or a poorly-timed nap will leave you feeling drained after you get up, and will make it harder to fall asleep come bedtime. Timing also matters. Grab a morning nap to boost your creativity and mental alertness or a late-afternoon nap to restore lost physical energy and boost your immune system--a nap around noon provides a little of both.

Snack smart and benefit from sustained energy throughout the day.

Soothe Your Skin's Winter Ailments

Kayla Fioravanti

The drying effects of winter are upon us. Here are some at-home ideas to help soothe your skin through this challenging season.

Cleanse

Put away your foaming gels and soaps and stock up on creamy products. Cleansing creams, lotions, and milks are great winter choices, because they don't contain the harsh, oil-stripping detergents found in most cleansing gels.

Tone

Shelve your astringents and switch to a toner. In the cold months, your skin needs to be soothed and balanced, not dried out further.

Moisturize

Choose heavier creams than you would in summer months. You can even use your heavy eye cream on your lips and face. If your skin itches, the dry air is causing the moisture in the top layer of your skin to evaporate quickly. Slather those areas with extra moisture until you feel relief, and never be afraid of using

pure oils on your skin--a bottle of jojoba or olive oil is great to have on hand.

Exfoliate

Exfoliate twice a week to remove dead skin cells and help your skin absorb the extra moisture you are using. Because central heating systems reduce the amount of sebum our skin secretes, contributing to dryness, exfoliation will free this natural regulating agent. Use a cream-based exfoliant with jojoba beads, so your body can soak up the rich oils.

Hydrate

For a simple in-home hydrotherapy treatment, start your day with a steamy shower. Just as you are finishing, switch the water to cold for about 15 seconds and then back to warm for 15 seconds. Repeat the process for two minutes.

Shower and Bathe with Oils

Did you know you can apply body oil, lotion, or cream during your shower or bath? The heat and steam help your skin to thoroughly absorb the moisture.

Probiotics for Skin Health

Trust Your Gut on This One!

Shelley Burns, N.D.

Digestive health plays an important role in how skin appears on the surface. When digestion is not working optimally, it allows toxins to be reabsorbed in the body instead of being eliminated. The body then mounts a state of emergency as it's overwhelmed by toxins, some of them bad bacteria. These manifest directly on the surface for all the world to see, in the form of wrinkles, blotchiness, skin rashes, and acne.

This is where probiotics come into play. Probiotics contain potentially beneficial bacteria found in the digestive tract--what some call good gut bacteria. They help strengthen the digestive system but they also play an important role in skin health. Probiotics consist of

Lactobacillus acidophilus, *Lactobacillus bulgaricus*, and *Bifidobacterium bifidum*. They have anti-inflammatory, anti-pathogenic, and antiallergenic properties and can be used prophylactically and therapeutically.

There have been many studies showing benefits of probiotics to skin health. For example, there's a correlation between an imbalance of good and bad bacteria and the onset of acne. When bringing natural bacteria back into balance with a probiotic intervention, acne improves, in some studies, as much as 50 percent of the time.

There is no recommended daily intake for probiotics, but good food sources include buttermilk, kefir, miso,

tempeh, yogurt, and other fermented foods. Supplements are generally higher in potency and are used for therapeutic purposes in treating irritable bowel syndrome, Crohn's disease, colitis, and many other conditions.

While probiotics are essential for healthy skin and digestive health, there are many other appealing benefits to encourage their use, such as strengthening the immune system, replacing good bacteria after a course of antibiotics, and contributing to general health and well-being.

One note: Some probiotic supplements come from dairy sources and may not be suitable for individuals with dairy allergies or sensitivities.

*Sometimes the
most important
thing in a whole
day is the rest we
take between
two deep
breaths.*

-Etty Hillesum

Happy New Year!!

Thank all of you for making 2011 a successful year! Many new clients, many former clients returning, and my committed base clientell have made it even more important to schedule appointmnets in advance. I appreciate your dedication to maintaining your health through massage.

Here's to an even healthier self in 2012,
