

Section 5 – Student Policies

5.015 – Health and Medication Guidelines

Children’s immunizations should be current.

If your child has had a fever of 100 OF or higher, shows signs or symptoms of being ill, do not send your child to school. If your child comes to school with any of these symptoms, parents will be notified to pick up the child.

The Health Department asks that children showing symptoms of cold, flu or other contagions, remain out of school for 72 hours.

Notify the school immediately when your child has a communicable disease or contagious skin disease.

Medication will not be administered to children without the proper forms completed.

In the case of an emergency, we contact 911 first, and then rely solely on your emergency contact information.

If your child will not be attending school due to illness, please call or email the office 30 minutes prior to your scheduled session.

Administration of Medications

It is generally recognized that some students may require medication for chronic or short-term illness during the school day to enable them to remain in school and participate in their education. Prescribers should be encouraged to write prescriptions for medications to be given outside of school hours whenever possible. OSCA will not administer the first dose of any medication.

The following guidelines have been established.

1. Instructions for providing standing orders are done annually, at the beginning of each school year, regarding the administration of medications in emergency situations such as a severe allergic reaction or anaphylaxis.
2. Student information surrounding a prescription is considered confidential and will not be shared with all staff unless not to do so would endanger the student. Only staff who need to understand a child's medical condition will be informed.
5. Drugs, including herbal preparations, will not be dispensed in excess of the manufacturer's recommended dosage.
6. OSCA will not knowingly administer prescription medications using text that cannot be read and clearly understood.
7. Medication must be delivered to attending staff in a properly labeled container from the pharmacy or in manufacturer's packaging.

8. OSCA does not employ an on-site nurse, and therefore medications are administered by lay persons.
9. Some medications may be self-administered if:
 - Written certification from a physician attesting to the student's need for and ability to administer the medication and that
 - OSCA assumes no liability as a result of injury arising from self-administrating.
10. OSCA documents when all medications are dispensed, which are kept in the student's permanent file.
11. Procedures for collection, storage, and delivery of medications will be followed according to the label.
12. OSCA will administer epinephrine pre-measured, auto-injection devices, that are given in the event of severe allergic reaction causing anaphylaxis only when there is an order (prescription) to do so.

Handling, Storage, and Disposal of Medications

OSCA will secure locked storage for all medications to prevent diversion, misuse, or ingestion by another individual. Schedule II controlled substances, e.g. Ritalin, will be inventoried upon receipt.

Expiration dates on any medications are checked on a routine basis (yearly).

A parent/guardian may retrieve their student's medication from the school at any time. Unused medication is sent home at the end of the school session.
