We have "800" phone update that cost \$6.00 per call, and billed to a credit card. Call (1-970-586-4760) for sign up. We update Eastern Time at 9:45 and 4:10. Question? Call (402) 413-0980.

We were looking for a stronger move than what we got as we were expecting a thrust through the February high. What we got was a modest close up on reduced volume and the VIX making a higher close and added to that the NYSE McClellan Oscillator closed below "0" (-45). SPY also has been drawing narrow days with reduced volume which represent a quiet market and weak upside momentum (momentum rules all indicators). A quiet market precedes a volatile market. Back on the sidelines for now and see what the quiet brings short term. Sold long SPX 8/18/20 at 3389.78=gain .49%; long 3373.43. Join us on twitter [@OrdOracle](https://twitter.com/OrdOracle)

Top window is the VIX and the second window up from the bottom is the SPY. SPY (along with the SPX) has broken to a high above the February high and the VIX is making a much higher low and is a significant divergence. Since markets are testing the February high it would make sense for a reaction to form around this level. For now an intermediate term divergence is present. Join us on twitter. Above is one of our intermediate term indicators which are the weekly Inflation/Deflation ratio. When the weekly RSI for the Inflation/Deflation ratio reaches above 70, higher highs in XAU (GDX) is expected. The weekly RSI of this ratio reached  $>70$  back in April. A high can be expected in XAU (GDX) when the weekly Inflation/Deflation ratio at least matches it previous high which was .29 (the time when the RSI reached  $>70$ ); the current price is .27. Higher highs are expected in the coming weeks. We remain intermediate term bullish. Long GDX on 7/8/20 at 38.62. [www.ord-oracle.com](http://www.ord-oracle.com).
