SPX Monitoring purposes; Sold long 4/9/21 SPX at 4128.80= gain 6.16%; Long SPX on 3/24/21 at 3889.14.

Monitoring purposes GOLD: Long GDV on 10/9/20 at 40.78.

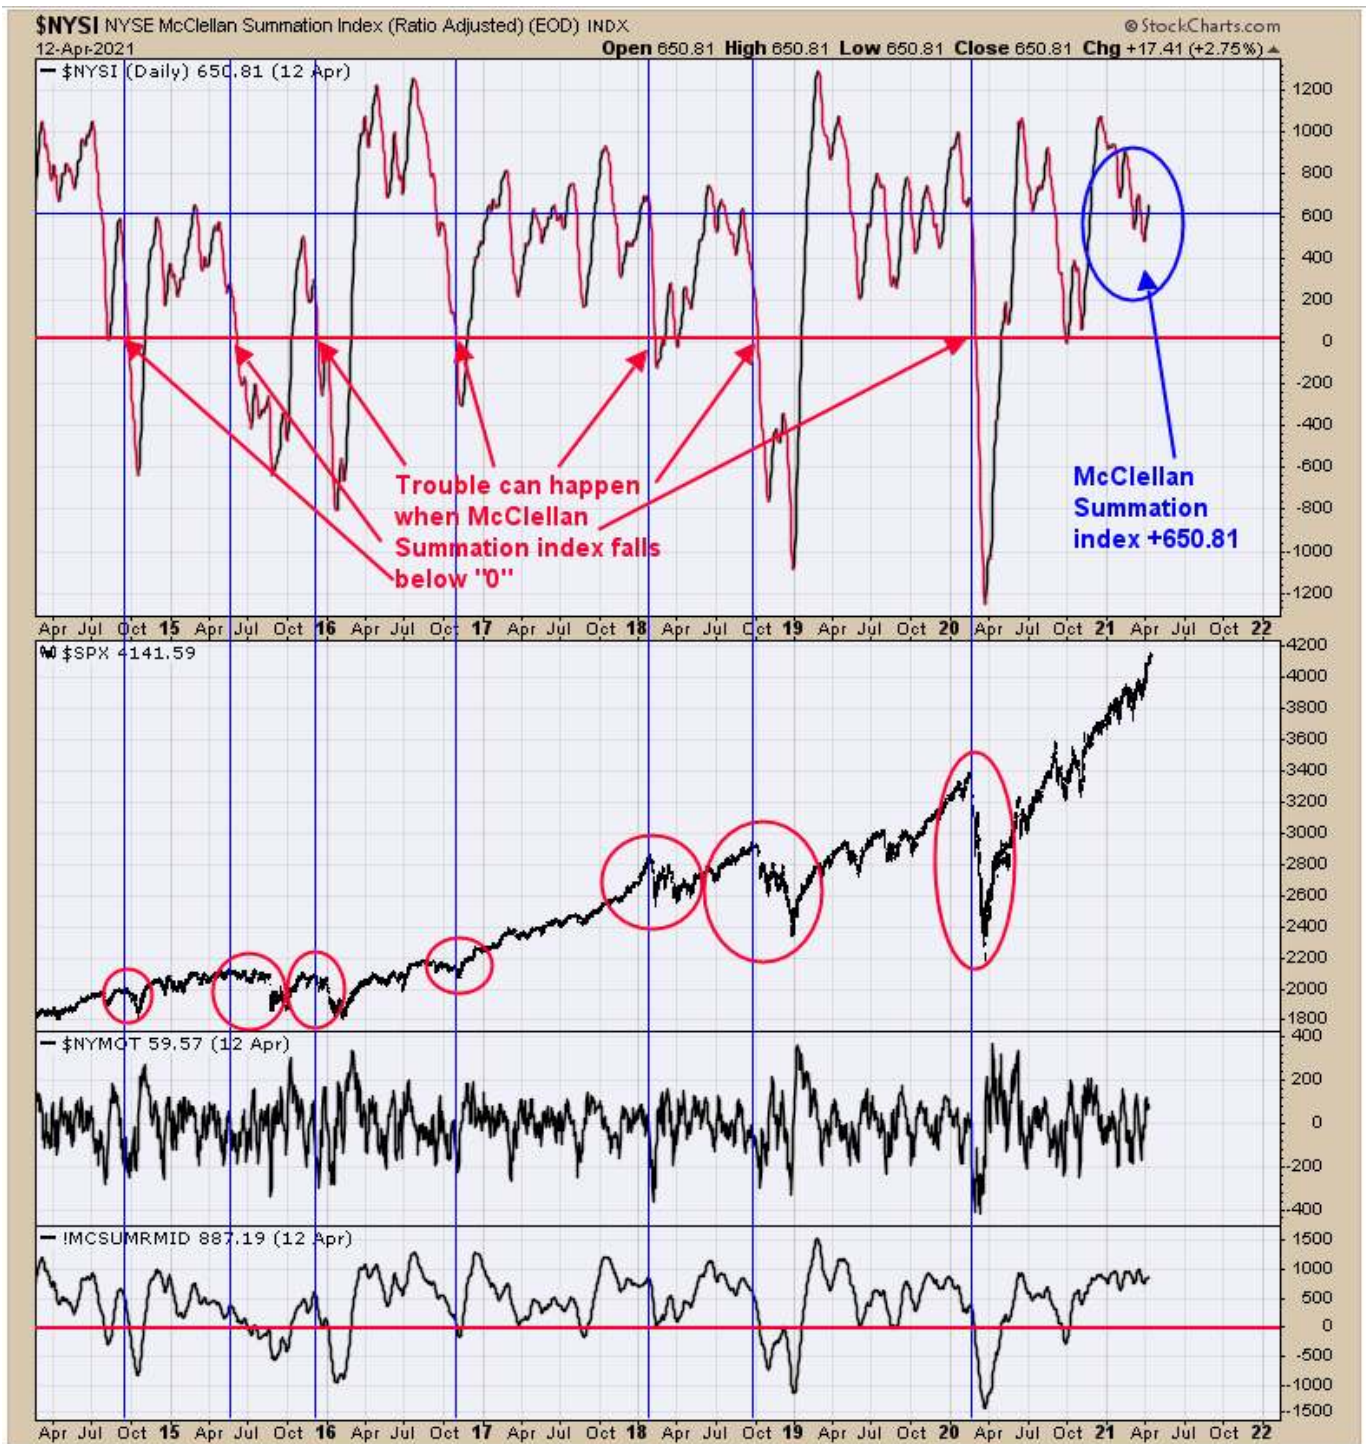

Long Term SPX monitor purposes; sold long SPX on 1/15/21 at 3768.25= gain 10.80%; Long SPX on 10/26/20 at 3400.97.

We have "800" phone update that cost \$6.00 per call, and billed to a credit card. Call (1-970-586-4760) for sign up. We update Eastern Time at 9:45 and 4:10. Question? Call (402) 413-0980.

Short term divergences are present in the market. The top window is the SPY/TLT ratio which follows the SPY and helps to confirm the up and down movement. When the SPY makes a higher high and the SPY/TLT makes a lower high there is a divergence; and this is what is happening now. The middle window is the VIX which moves the opposite of the SPY. Today the SPY touched a new high and the VIX made a higher low which is another divergence. Not expecting a large pull back here but a timeout to the uptrend is likely in the coming days. There is a gap near the 400 SPY level and is our worst case scenario for a potential pull back. Staying neutral for now. Join us on twitter. [@OrdOracle](https://twitter.com/OrdOracle)

The market is in good shape. The top window is the NYSE McClellan Summation index. Market is considered in an uptrend when this index is above "0" and a strong uptrend when it stays above +600 (current reading is +650.81). There can be short term pull backs when the Summation index is above "0" but a 10% or larger pull back is unlikely. Things can get ugly when the NYSE McClellan Summation index falls below "0" which is identified with blue vertical lines on the chart above.

Above is the monthly XAU/Gold ratio going back to 1999 (middle window). The monthly GDX/GLD ratio is setting at an important level up against a trend line which is the 2016 and 2014 highs and the 2009 low along with the downtrend line going back to 1996. These trend lines converge near .085 on XAU/Gold ratio (Yesterday's close was .083). The top window is the monthly RSI for the XAU/Gold ratio which has been rising the last few months showing the ratio has been rising. This ratio has been "hugging" the red vertical line since last August and not backing away suggesting at some point this ratio will power through this line. The rally through both of these trend lines most likely will be strong as that is usually what happens when resistance is broken. A jump in the XAU/Gold ratio will produce a strong rise in gold stocks. Don't know when this jump will occur as this chart is on the monthly time frame but would appear it could be within the next several weeks if not sooner. The wait should be worth it. Long GDX (10/9/20 at 40.78).
