We have "800" phone update that cost \$6.00 per call, and billed to a credit card. Call (1-970-586-4760) for sign up. We update Eastern Time at 9:45 and 4:10. Question? Call (402) 413-0980.

Yesterday we said, "The strongest week seasonality wise for the next four week is this week. This week is also option expiration week which as a bullish bias. Today marked the five day up in a row. This scenario points to the conclusion market will be higher within five days 85% of the time and the average gain is .8%." The 5 day up thing keeps the trend up. Bottoms form on Panic and we use the TICK and TRIN readings to help define panic. What we are looking for now is panic readings in the TRIN and Tick. Yesterday the TRIN closed at 1.38 which is showing panic. If the tick closed below .300 today we would have issued a bullish signal; however the tick closed at +170 which is not showing panic. What it appears short term is there is not enough panic in the market to get a rally going an panic may develop short term to finish the bottom process. Join us on twitter. We updated this chart from yesterday. The above chart is NYSE McClellan Summation index (which you have seen before) showing the NYSE McClellan Summation index (Monday's close) at +174. Large declines can occur when the Summation index drops below "0"; market is not setup for a large decline here because the Summation index is far above "0". Join us on twitter. [@OrdOracle](#)

Yesterday we looked at the 18 moving average of the Advance/Decline percent for GDX and the 18 moving average of the Up Down Volume percent for GDX. Above is the 50 day average for both indicators which take in a longer term time span. We marked with blue vertical lines the times when both indicators reached below -20. It would seem when both 18 and 50 day moving average of both indicators reach bullish levels the odds are high for some type of rally to begin. Momentum rules all indicators and the monthly timeframe rule the weekly and the weekly rule the daily. The monthly mid Bollinger Band for GDX is rising, suggesting the monthly trend is up. Appears to be more of a waiting game before the rally gets going.
