The above chart shows the TRIN with a 5 day average (bottom window); a three day average (middle window) and the 10 day average (top window). The red vertical shows the times when 3, 5 and 10 day average of the Trin reach bullish levels. All times the 3 moving averages reached bullish levels; the market was either at a bottom or in the process of a rally. The 10 day TRIN just ticked to a bullish level on Friday with a reading above 1.20. Got panic in a lot of different indicators starting on April 26 and panic are what bottoms are made of. Need to see a "Sign of Strength" of this low to keep larger trend bullish. Join us at [@OrdOracle](https://twitter.com/OrdOracle)

Panic forms at lows in the market and a lot of panic started to from starting April 26. The second window down from the top is the daily VIX. The top window is the RSI for the VIX. RSI readings for the VIX >70 suggests a large acceleration of the VIX which is a form of panic and the RSI hit 70 range on 4/26. The bottom window is the Rate of change for the VIX and readings above 30 also shows an acceleration of the VIX and 30 range was hit on 4/26. Next window higher is the Percent Bollinger band which shows readings above 1.00 are when VIX hits its upper Bollinger Band: Readings above 1.20 implies VIX has gone up to fast and should normalize back to .5 or lower. Percent B traded above 1.20 also on 4/26. Its fairly rare to get all three indicators to extreme levels (happens every 3 months or longer). The last time came in early December 2021 low nearly five months ago. Join us on twitter. [@OrdOracle](https://twitter.com/OrdOracle)

We updated this chart from past reports which is the monthly Inflation/Deflation ratio. We pointed out earlier this year that the monthly Bollinger bands are pinching on this ratio suggesting a large move is nearing. Since then the monthly Bollinger Bands are just starting to expand suggesting this large move is beginning. Notice also that the ratio has closed above its trend line connecting the high going back to 2016 which is a breakout. The top window is the RSI for this ratio which is above 50, showing this ratio is in an uptrend. Another bullish factor is that the ratio is above its mid monthly Bollinger Band. Monthly chart remains bullish and according to the studies on this page the rally is in the early stages of a bullish move.
