

Raffle For Remington 2020 tactical .308 rifle with Digital Optic System

Description:

Here's a very unique new product from REMINGTON -- A "MODEL 700 SPS TACTICAL AAC-SD WITH THREADED BARREL CHAMBERED IN .308" WITH THE "2020" DIGITAL OPTIC SYSTEM. The rifle is packaged in a hefty "SKB" case with extra batteries and a charger, and cord to down-load videos from the sight.

Created through a collaboration between Remington Arms Company, LLC ("Remington") and TrackingPointTM, an applied technology company in Austin, Texas, the Remington 2020 Digital Optic System revolutionizes long-range accuracy by combining hand-selected rifles, matched ammunition, digital optics and target-tracking technology into an integrated shooting system.

"The Remington 2020 advancement in firearms Blackwell, president of been a leading innovation shooters since 1816. TrackingPoint we are now network and technology continue to enhance our result; we have created the ultimate hunting and shooting confidence builder that allows the user to share their experience from start to finish."

System is the next significant technology," said Scott Remington. "Remington has provider to hunters and Through our partnership with leveraging a powerful R&D engine allowing Remington to consumer's experience. The end

The Digital Optic System:

The digital optic system effectively bundles numerous devices and technologies together in a state-of-the-art package that brings confidence and improved accuracy to the shooter at distances of up to 500 yards. Integrated capabilities include:

- 3-21X Digital Scope
- Laser Rangefinder (750 Yard Range)
- The Most Advanced Ballistic Computer Available
- Video /Audio Recorder
- Still Camera (frame capture)
- Wi-Fi Server

Looking through the Remington 2020 Digital Optic System, the shooter is presented with a Heads-Up Display (HUD) that overlays the information about the ammunition, environment and shot orientation that effect accuracy to the field of view before them. Through a sequence referred to as Tag, Track and React (TTR™), the Remington 2020 Digital Optic System allows the shooter to designate the desired location of a shot (“Tag”). The advanced internal ballistic computer immediately generates a firing solution based on a far greater number of inputs and factors that affect the bullet’s flight than other ballistic calculators or tables. The shooter then simply adjusts their point of aim to bring the ballistically corrected reticle on target (“Track”) and take the shot (“React”). Even on targets moving up to 10 mph.

Recording and Streaming

The system can also broadcast a Wi-Fi signal allowing others to see a streaming live video feed from the HUD via a smartphone (Apple iOS or Andriod) app. For the first time, another person can share what the shooter is seeing and doing wirelessly for more effective coaching, mentoring or guiding. From the time a Tag is placed until a preset time after the shot is taken, this stream can also be recorded, with audio, to internal memory for later downloading and sharing.

The System

- A Hand-Selected Rifle – Remington Model 700TM SPS Tactical AAC® -SDTM with Threaded Muzzle chambered in 308 Win
- Mounted Remington 2020 Digital Optic System, zeroed and loaded with ballistic profiles for three paired ammunition types – a target round, a traditional hunting round and a

Barnes™ Vor-tx® TSX round.

Suggested Retail Price – \$5,499.99 – 5,574.99

The benefits of the Remington 2020 go beyond improved shot placement and the consolidation of gear currently required to perform ballistic calculations. The true benefit lies in the confidence, and enhanced capabilities that this technology provides to the user. All of which encourages a more ethical hunt.
