Circuplex®

Circuplex Supports the Healthy Function of the Circulatory and Parasympathetic Nervous Systems

The B-complex family of vitamins work together as a team to keep us healthy, either directly or by playing a "behind-the-scenes" role in multiple physiological processes throughout the body. They directly affect the health and general well-being of most of our major organ systems, influencing things like nerve conduction, immune response, skin health, visual acuity, gastrointestinal efficiency, liver function, and energy production, just to name a few. The niacin (vitamin B_3) found in Circuplex can help encourage proper circulation and keep the skin healthy. Vitamin B_3 also plays a part in nervous system function and assists in metabolizing carbohydrates, fats, and proteins. Vitamin B_6 is involved with more bodily processes than nearly any other nutrient, affecting physical and mental health alike. Vitamin B_6 helps regulate the delicate fluid balance in the body, promotes red blood cell formation, enhances brain function, and is necessary in synthesizing RNA and DNA, which carry our unique genetic coding to regulate cellular growth and reproduction.†

How Circuplex Keeps You Healthy

Promotes healthy nervous system function

Both niacin and vitamin B_6 play a role in nervous system function. Vitamin B6 is intimately involved in numerous metabolic processes within the central nervous system and is necessary for normal brain function.†

Keeps your heart healthy

Niacin helps promote healthy cholesterol levels in the blood in individuals with healthy levels. Vitamin B_6 discourages the formation of homocysteine and helps the body maintain healthy levels.†

Maintains cellular health

Niacin functions as two important coenzymes that are key to cell respiration, carbohydrate and protein metabolism, and lipid synthesis. Vitamin B_6 plays a direct role in regulating proper cell growth and division. Vitamin B_6 also promotes red-blood-cell formation and helps maintain the sodium/potassium balance, which is important in helping maintain proper water levels in the body.†

Supports digestive function

Both niacin and vitamin B_6 are needed to produce hydrochloric acid, which is needed to digest food. Niacin is involved with normal bile secretion and stomach fluids.†

Introduced in 1964

Content:
150 capsules

Suggested Use: One capsule per meal, or as directed.

Supplement Facts:
Serving Size: 1 capsule
Servings per Container: 150

	Amount per Serving	%DV
Calories	2	
Niacin	30 mg	150%
Vitamin B_6	4.7 mg	240%

Proprietary Blend: 420 mg
Ribonucleic acid, arrowroot flour, dried buckwheat (leaf) juice, buckwheat (seed), bovine liver, phosphoric acid, porcine stomach, bovine spleen, ovine spleen, soy (bean), calcium lactate, defatted wheat (germ), para-aminobenzoate, bovine adrenal Cytosol™ extract, porcine brain, inositol, ascorbic acid, and magnesium citrate.

Other Ingredients: Gelatin, niacinamide, water, pyridoxine hydrochloride, calcium stearate, and colors.

Sold through health care professionals.

Whole Food Philosophy

Our founder, Dr. Royal Lee, challenged common scientific beliefs by choosing a holistic approach of providing nutrients through whole foods. His goal was to provide nutrients as they are found in nature—in a whole food state where he believed their natural potency and efficacy would be realized. Dr. Lee believed that when nutrients remain intact and are not split from their natural associated synergists—known and unknown—bioactivity is markedly enhanced over isolated nutrients. Following this philosophy, even a small amount of a whole food concentrate will offer enhanced nutritional support, compared to an isolated or fractionated vitamin. Therefore, one should examine the source of nutrients rather than looking at the quantities of individual nutrients on product labels.

Circuplex®

What Makes Circuplex Unique

Product Attributes

Multiple nutrients from a variety of plant and animal sources

- Extracts from bovine, ovine, and porcine tissues provide nutrients and support to the corresponding tissues in humans
- Vitamins, minerals, and nutrients from plants and animal tissues work synergistically for maximum effect†

Organic Farming

A healthy ecosystem is created by using organic farming techniques, such as rotating crops, fertilizing the soil with nutrient-rich cover crops and byproducts from our processing, practicing strict weed-control standards, and continually monitoring the health of our plants

- Assures the soil is laden with minerals and nutrients
- Ensures plants are nutritionally complete and free from synthetic pesticides

Manufacturing and Quality-Control Processes

Upon harvesting, nutrient-rich plants are immediately washed and promptly processed

- Preserves nutritional integrity

Low-temperature, high-vacuum drying technique

- Preserves the enzymatic vitality and nutritional potential of ingredients

Not disassociated into isolated components

- The nutrients in Circuplex are processsed to remain intact, complete nutritional compounds

Degreed microbiologists and chemists in our on-site laboratories continually conduct bacterial and analytical tests on raw materials, product batches, and finished products

- Ensures consistent quality and safety

Vitamin and mineral analyses validate product content and specifications

- Assures high-quality essential nutrients are delivered

Studies on nutrients generally use large doses and these studies, some of which are cited below, are the basis for much of the information we provide you in this publication about whole food ingredients. *See the supplement facts for Circuplex®.*
